SANOG 10 Workshop
August 29-Sep 2 – New Delhi, India
Hervey Allen
What's it Do?

**Software Configuration Management**

- wiki for collaboration
- Interface to subversion for change management.
- Timeline for milestones, progress reports, etc.
- Ticketing system
- Integration with email
Installation

We'll create a fairly complex trac project...

- Multiple trac environment configuration.
- Authentication via trac not Apache.
- trac user admin via web interface.
- write-protected for anonymous users.
- Ability to add subversion later.
- Aztech calendar plug-in.
trac: Some Details

- Let's look at the wiki...
- Let's look at the ticketing system...
- Let's look at different user views...
trac install and post install

Let's do the following:
1.) Install
2.) Review the install
3.) If time, do a few more exercises:
   • Add “TICKET_VIEW” to the anonymous user profile.
   • Find a plugin you want and install.
