intERLab at AIT 2008 Workshop
March 11-15 – Bangkok, Thailand
Hervey Allen
What's it Do?

Software Configuration Management

- wiki for collaboration
- Interface to subversion for change management.
- Timeline for milestones, progress reports, etc.
- Ticketing system
- Integration with email
Installation

We'll create a fairly complex trac project...

- Multiple trac environment configuration.
- Authentication via trac not Apache.
- trac user admin via web interface.
- write-protected for anonymous users.
- Ability to add subversion later.
- Aztech calendar plug-in.
trac: Some Details

• Let's look at the wiki...
• Let's look at the ticketing system...
• Let's look at different user views...
• Then we'll install.
trac install and post install

Let's do the following:

1.) Install
2.) Review the install
3.) If time, do a few more exercises:
   • Allow *anonymous* user to see tickets. (add TICKET_VIEW and REPORT_VIEW permissions)
   • Find a plugin you want and install.
