1. Install cvsweb

        # apt-get install cvsweb

2. Edit the file /etc/cvsweb/cvsweb.conf:

        # vi /etc/cvsweb/cvsweb.conf

        - Change the line:

'local'   => ['Local Repository', '/var/lib/cvs'],

        to

'rancid'   => ['Rancid Repository', '/var/lib/rancid/CVS'],

        and just below add a new line:

'configs'   => ['Configs Repository', '/home/myusername/cvs'],

        (This is to show the CVS from earlier!)

        - Save and exit

3. Open your web browser, and go to this address:

        http://169.223.2.X/cgi-bin/cvsweb/

        ... where X is your IP address

        - Notice the pulldown menu "CVS Root:". Here you can choose
          which repository to look at -- you should see two:

          - Configs
          - Rancid

        - Navigate in the corresponding repository, and explore the files.
